Groundwater Toolbox Information Excerpts

GROUNDWATER “TOOLBOX”

MEETING OBJECTIVES

JANUARY 2004

1. To provide the technical and regulatory background needed to frame a future Fernald Citizens Advisory Board (FCAB) Recommendation.
 - In essence, what do we need to know about the treatment system -
- how it works, what the regulatory framework is, and what its discharge impacts to the environment are -- to make an informed decision?
2. To gain an understanding of the present course we are on
(e.g., “status quo” remedy under the Operable Unit 5 ROD).
3. Walk through the decision framework, and the approaches to consider, leading to a new course of action as desired.
4. Answer questions.
5. Outline remaining steps and future meetings leading to a draft FCAB Recommendation.

Suggestions for next meeting:

- Hear from FCAB as to what is important to them.
- Begin to look at dollar tradeoffs.

DOE'S GROUNDWATER OBJECTIVE

DOE's Objective:

1. Dismantle the Advanced Wastewater Treatment (AWWT) facility and place it in the On-Site Disposal Facility (OSDF) prior to 2006.
